

PI Competence Center

The PROFI Interface Center is a certified PI Competence Center (PICC) for PROFINET, PROFIBUS and PROFIsafe, offering technical expertise in North America for decades.

We provide free technical support to anyone who needs it, especially to first-time users and developers of PROFINET devices and systems.

Please contact us for...

- questions about PROFINET, PROFIBUS, PROFIBUS PA and PROFIsafe technology
- help to get started with your own device development projects
- having your PROFINET and PROFIBUS devices certified
- training needs, on-site and off-site
- support through your entire development and certification process

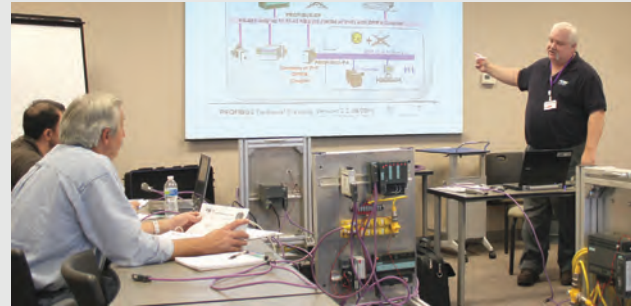

Onsite Troubleshooting and Network Analysis

Our PROFIBUS and PROFINET engineers are available for on-site troubleshooting and network analysis. Whether you have problems with an existing network or want to have your new installation verified before it goes into production - we're here to help with our experts and tools.

About the PROFI Interface Center

The PROFI Interface Center (PIC) was established in 1996 in Johnson City, TN to allow easy and direct access to PROFIBUS and PROFINET technology.

The PIC team provides you with a variety of useful services including seminars, integration support and device conformance testing for PROFINET and PROFIBUS. In addition, it supplies development products and assists you in developing devices – from initial design to certification testing.

The PIC is accredited through PROFIBUS and PROFINET International (PI) as an official Test Lab (PITL) for PROFINET device and controller certification and PROFIBUS DP slave and master certification.

The PROFI Interface Center also serves as a certified Competence Center (PICC) as well as a certified Training Center (PITC) for PROFINET and PROFIBUS. Our Quality Management System is ISO 9001 certified.

Visit our website ProfiInterfaceCenter.com for more information, resources and tools.

Member Organization

PI Training Center

The PROFI Interface Center is a certified PI Training Center (PITC) for a variety of classes.

Certified Network Engineer

Become a PROFINET or PROFIBUS (DP and PA) expert by taking one of our PROFItch classes.

Attendees who successfully complete the written and practical tests are rewarded with the title 'Certified Network Engineer'. They also earn 24 Professional Development Hours (PDH).

For those that need a solid understanding of PROFINET, but don't require a deep dive into how PROFINET works behind the scenes, we offer a shorter two-day class as well.

Free One-Day Training

PI North America and the PROFI Interface Center are holding free one-day training classes throughout North America. Attendees of each class will receive a certificate for 5.5 Professional Development Hours (PDH).

More Training and Support

We offer installation classes and can do on-demand events at your facility. This also includes development classes and workshops tailored to your needs. Online resources are also available, like webinars and videos.

PI Test Laboratory

PI Test Laboratories (PITLs) are test centers authorized by PI to perform certification tests on PROFIBUS and PROFINET devices.

The PROFI Interface Center has been a PI accredited Test Lab since 1996 and is the only Test Lab in North America.

Certification testing adds another level of quality control to your product development process and ensures interoperability. Our experience is your advantage to release a reliable and user-friendly device into the market. To emphasize this, we also offer Pre-Certification testing beforehand. Certification is mandatory for PROFINET products.

We offer test services along with expert support to make sure your device certification is a success.

PROFINET Development

The PROFI Interface Center offers the products and tools needed for your successful PROFINET or PROFIBUS implementation - along with free support!

The development of a device typically involves hardware, firmware / software along with development tools to get you started.

We provide a variety of products for PROFINET and PROFIBUS implementation:

- ASICs
- Development Kits
- Protocol Stacks
- Test Tools and Software

For your PROFINET device implementation we offer these solutions:

- Software based using a standard microprocessor
- Hardware based with a PROFINET Chip (ERTEC)
- or PC based

Siemens is a pioneer in PROFI technology and the industry standard in PROFINET implementation.
